

TC24- Ring / Gasket Style Thermocouple with Lead Wire and Connector

TEMPERATURE SENSOR

TC 24 is a surface measurement thermocouple in applications such as tube surface, barrel or mold. The ring or lug is bolted on to a threaded stud. A ring or lug thermocouple is commonly connected in parallel with another thermocouple to control at average temperature between the surface and inside the tube/barrel or tank. This arrangement helps in precise control for more uniform temperature of molten plastic.

Key Feature:

- Available in type J, K, T .
- Available in copper or stainless steel ring material.
- Welded or Nickel Brazed Ring for High Temperature Applications.
- Grounded, Ungrounded junction to meet application requirement.
- Available with low temp and high temp connectors.
- Available in IEC 60584 & ANSI MC 96.1 standard tolerances

Thermocouple Junction options for TC24

Ungrounded Junction: Junction is similar to grounded junction except wire are fuse welded, which is then insulated with Mgo powder and formed cap by welding without incorporating thermocouple wires. Thus, the junction is called the ungrounded junction.

Key Benefits :

- Wires are protected from any mechanical damage
- Offers rugged construction, the same as the grounded junction.
- Strain due to differential expansion between wire and sheath is minimized with insulated wires.

Grounded Junction: In grounded junction thermocouple wires and sheath of the mineral insulated cable is welded together to form a junction. Thermocouple wires and sheath becomes an integral part of the junction. Thus, the wire is grounded to the sheath.

Key Benefits:

- Slower response than Exposed junction, but offers rugged construction.
- Can hold higher pressure than exposed junction and Ungrounded junction.

Suggested Maximum Temperature Limit

Thermocouple Type	°C (F)	°C (F)	°C (F)	Style
Probe OD	1/8"	3/16"	1/4"	
T	315(600)	370 (700)	370 (700)	Lug Type
J	450(842)	450(842)	450(842)	
K	450(842)	450(842)	450(842)	
T	315 (600)	370 (700)	370 (700)	Ring Type
J	520 (970)	620(1150)	720 (1330)	
K	520 (970)	1150 (2100)	1150 (2100)	

The suggested maximum temperature limit is based on information available in the ASTM standard and test performed in our facility. The maximum temperature limit may change based on the type of process and material/ liquid it is going to be used in. These limits apply to protected thermocouples.

Response Time without Ring or Lug

Thermocouple OD	Junction		
	Exposed	Grounded	Ungrounded
1/25"	0.005	0.1	0.3
1/16"	0.02	0.2	0.5
1/8"	0.03	0.7	1.3
3/16"	0.07	1.1	2.2
1/4"	0.1	2.2	4.5
3/8"	0.9	2.7	7.5

Response time is measured in liquid by inserting thermocouple into the temperature-controlled circulating bath. Time taken to reach 63.2% of a step temperature change is noted as the response time of thermocouple. For a fast response, the exposed tip is recommended, but the exposed junction is not as rugged as ungrounded and grounded junctions for industrial use.

Temperature Accuracy As per ASTM E608/608M/ IEC 60584 & ANSI MC 96.1 standard tolerances

	-200 °C to 0 °C	± 1.7 °C or 1.0% Whichever is greater	N/A
E	0 °C to 900 °C	± 1.7 °C or .5% Whichever is greater	± 1 °C or 0.4% Whichever is greater
	-200 °C to 0 °C	± 2.2 °C or 2.0 % Whichever is greater	N/A
KORN	0 °C to 1250 °C	± 2.2 °C or .75% Whichever is greater	± 1.0 °C or 0.4% Whichever is greater
	-200 °C to 0 °C	± 2.2 °C or 2.0 % Whichever is greater	N/A

Notes:

- All the thermocouples are manufactured as ASTM E608/608M
- Calibration is available as per ASTM E220 on request
